(1) GENERAL PURPOSE TRAILER
This trailer is used for fire extinguisher, HAZWOPER, scaffolding training, or general equipment transportation. It has shelves in the front and on the side.

(2) CONFINED SPACE ENTRY TRAINING TRAILER
A special deck on top of this trailer with an opening allows employees to practice confined space entry in a safe learning environment. Accompanying equipment includes: tripod, harnesses, winches, gas meter, and other confined space training equipment.

(3) MOBILE HEARING TRAILER
With our two state of the art trailers we can test 2 or 4 employees simultaneously. On-site audiometric testing has never been easier or more cost effective. A CAOHC certified technician using the fastest testing software makes testing very fast and informative. Both trailers are completely climate controlled and have 50” LCD scenes for providing high quality training while you already have the employees attention.

(4) HEAVY EQUIPMENT MOBILE TRAINING UNIT
Heavy equipment varies from the extreme heavy equipment to the portable, mobile, lighter equipment. Any business or individual involved in the construction industry at times needs heavy equipment operator training. Classes focus on the hands-on, skills training aspects of heavy equipment operation. Students learn to safely and efficiently operate different pieces of heavy equipment.

(5) DRIVER SIMULATOR MOBILE TRAINING UNIT
Autry offers a complete line of training and exercise programs for the transportation industry, emergency medical responders and firefighters, law enforcement, commercial vehicle and novice drivers. Simulation lets drivers experience threatening road conditions in a safe environment – especially the extreme situations you just can’t duplicate in a real motor vehicle.
